About The WETIT Platform Magic™

WETIT Platform Magic™ uses electronic sensors to “see” the bale position and identify the exact moment to spray the teats. The Platform Magic™ then sprays a measured dose of disinfectant just before the cow backs away. The WETIT “Cups on Detection” is built into the **TSM** (Teat Spray Manager) to ensure that cows that are still milking are not sprayed. Having no moving parts, the Platform Magic™ is robust and requires low levels of maintenance.

WETIT Platform Magic™

Benefits

- Automated teat spraying proven to reduce mastitis and improve teat condition.
- Significantly reduces time and labour.
- Consistent and accurate spraying, enabling teat spray use to be optimised.
- Affordable and low maintenance.
- WETIT's direct and dealer network support for more than 25 years

Features

- Simple, fixed mounted sprayer, no moving parts and low maintenance costs.
- Uses electronic sensors to detect the bale position and cow.
- Identifies the exact moment to spray the teats after the cups are removed.

WETIT Teat Spray Manager (TSM) includes:

- Cow Counter
- Herd Split alarm (optional alarm)
- Cups on/off detection
- 5 different spray settings
- Sensor monitoring for trouble shooting
- Sensor lockout to bypass faulty sensors and continue spraying
